Day 3 of data received and attached. I asked lab for a status on the Level IV packages, and I haven't heard back from my data validator yet.

Thanks, please when you can give me an update on timing of products from lab. I realize you may have to contact them. Thanks

Subject: RE: Validation process

Our data validators go through the data packages to determine if QC specs were achieved (matrix spikes, matrix duplicates, temperatures, hold-times, etc.) They'll look at the qualifiers associate to the samples by the laboratory to ensure everything is correct, and that we can actually use the data (low, high, or unknown bias). They review the labs internal QC methods as well to ensure there wasn't any kind of lab contamination to the samples.

If they're not busy on another project, generally our data validators can go through a lab report within a day. Some times they've got to actually speak with the lab to get answers for questions they have. This can slow down the process since the lab would need to do a little research into whatever issues may have occurred during the analytical process.

Just for my own knowledge, what is the process for the validation.

Also can you give me a timeframe with that...thanks (still learning as I go)
